

# Predictive Diagnostics

Reliably prevents breakdowns with Smart Data

Connected mobility

Component and system conditions securely and precisely evaluated

**satisfied customers**

through innovative, proactive services and significantly fewer breakdowns

**optimized vehicle availability**

through avoidance of unforeseen failures

**reduced maintenance and servicing costs**

through vehicle-specific, needs-based maintenance

- ▶ Predictive diagnostics facilitates vehicle-specific prediction of the component and system condition, and optimized planning of maintenance tasks based on status data from the connected vehicle.
- ▶ Fleet operators benefit from optimized maintenance task planning and an improved fleet availability.
- ▶ Predictive diagnostics reduces the time required for repairs by up to 25% through improved workshop utilization and optimized spare parts logistics. Therefore, workshop visits can be significantly shortened and overall reduced.
- ▶ The Bosch software solution is available as software as a service or as license model.
